Something like this?

In window constructor

```
editVendData <<= THISBACK(SyncFields); // Sets WhenAction callback
```

Sync function:

```
SyncFields()  
{  
    if (editVendData.GetLength())  
        // Disable length field and set data to length of data field  
        editVendLength.Enable(false) <<= editVendData.GetLength();  
    else  
        editVendLength.Enable(true);  
}
```
