I think I will provide plenty of those over time..

But it's not only about preprocessing, I have some more basic problems, like I don't have local variables parsed.

```
void TestLocalVariablesParsing( int variableone, int anothervariable, int thirdvariable )
{
//here write "vari" and hit Ctrl+Space .. nothing is suggested.
//here write "ano" and hit Ctrl+Space .. nothing is suggested.
String tempstring;
//here write "temps" and hit Ctrl+Space .. nothing is suggested.
}
```

It annoys me a lot personally, I'm used to IDEs which do parse local variables. (MSVS, VSlick).

Use Ctrl+, for local variables.
