Hi,
I work for a few months with upp and now I have a problem with sqlite:

```
Sql sqlVer;
Sql sqlRaum;
Sql sqlNew;

sqlVer * Select(RAUMID).From(VERANST).Where(VID == id);
sqlRaum *
Select(SEKTION,REIHE,PLATZ,PREISGR,XDISPL,YDISPL,COLDISPL).From(RAUMPLAN).Where(RNR == sqlVer[RAUMID]);
String TableName = Format("%08d",id);

String s = "CREATE TABLE V" + TableName;
 s += " (ID integer primary key autoincrement , SEKTION integer, REIHE integer,";
 s += " PLATZ integer, PREISGR integer, XDISPL integer, YDISPL integer, COLDISPL integer)";

sqlNew.Execute(s);
```

Generates a error:

```
ERROR SQL logic error or missing database(0): CREATE TABLE V00000013 (ID integer primary key autoincrement , SEKTION integer, REIHE integer, PLATZ integer, PREISGR integer, XDISPL integer, YDISPL integer, COLDISPL integer)
ERROR database table is locked(0): Resetting statement: CREATE TABLE V00000013 (ID integer primary key autoincrement , SEKTION integer, REIHE integer, PLATZ integer, PREISGR integer, XDISPL integer, YDISPL integer, COLDISPL integer)
```

Can someone please tell me what is wrong here.

Thanks in advance,

Alex
