Hi,

first i must thank for providing us such a nice package.

At the moment I'm at the beginning of learning to use UPP. In fact I have problems to find out for what i can set THISBACKs (Or with the Callbacks in general ). Searching in the documentation i had found a page which shows the THISBACKs-Browser. So i thought i should look in there for possible options. But the problem is, that the cammand does not react. No window pop up. Do i something wrong? Or does it actually not work?

System: Windows2000 Prof.
UPP: upp-mingw-710-dev1.exe (same problem in stable)

Edit: Ok. I found out that it was my fault . It works fine if you are in a function wich has access to a Callback. Which is logical...

greetings loki
