Hi. I have just installed Thelde on Ubuntu 7.10. The problem is that the templates are missing. When i try to make a new project, based on templates, there is no template. I'm using 2007.1 version of ide (installed from \*.deb pack found on sf.net). Are the templates missing in that version of ide on Linux or is it a local problem of mine? Should i use the new version(712-dev1)?
