I had only the case

```
class X {  
    static Mutex lock_for_A;  
    static Value A;  
    void function_to_process_A() {  
        // ... using that Mutex *HERE*  
    }  
};  
on mind
```

Didn't even think about your static Mutex inside some function, thanks for pointing that out, I could have eventually confused somebody (including myself).
