Hi Mirek
U++ is a marvellous C++ piece of code
I am programming in C++ since 2 years migrating from Visual Basic and I am tryng to migrate my consult software (home VB brew) to C++ so i am totally new with U++
Reading every example and docementation about MySQL I am not able to compile any code to link MySQL
Added MySQL, Sql & SqlCtrl to ACOMAR(my package), paths with setup are correct but still errors, first of all is MySql.cpp -> MySql.h: No such file or directory.....
Is out there any easy guide to link with MySQL beginning from zero?
Thank you very much
