Hello all

If anybody needs them, in bazaar/sysinfo there are these functions:

```
// Appends a file after other  
// It could be beside FileCopy, FileMove and FileDelete  
bool FileCat(const char *file, const char *appendFile)
```

```
// Convert a long into a String  
// It could be beside FormatInteger, FormatUnsigned, FormatDouble, FormatBool and FormatInt64  
String FormatLong(long a)
```

```
// Replace find with replace in str  
String Replace(String str, String find, String replace)
```

Best regards
Koldo
