Hello mrjt

Thank you for your answer!. I would not like to press you but I like this control .

Well, I have done a new Display. It is not very clean as I do not want to change the Display. I want only to display other text.

One thing: I have done this fix:

```
TabBar& SetDisplay(const Display &d) { display = &d; Refresh(); return *this; }
```

The return \*this; was not included in the original code.

Waiting for your code...

Best regards  
Koldo
