Subject: Feature request to support existing projects

To import/convert existing projects into TheIde it would be nice to import an entire directory-tree at once.

Now, creating a package for an existing project that contains 10 directories is quite some work.

Also, you must be very careful not to add files to the package that TheIde does not support because (referring to the earlier bug report about png/bmp files) because TheIde will crash an not save the project, so you have to start all over.

Suggested feature:

Import a directory-tree, perhaps specify to import only a certain mask, also add an option to separate the files per-directory.

Something like:

Import: /home/jan/myprogram/head_revision
mask: *.cpp, *.h, *.i, *.ico
[x] create separators for each directory

Greetings,

Jan
