So as not to waste a whole new topic on this ...

there's a minor doc error for ArrayCtrl IsCursor - should have  $\geq 0$

```
bool IsCursor() const
```

Checks whether the cursor is within the table. This is equivalent to `GetCursor() > 0`.

Return value

and ... to be on topic ... this tutorial is very useful and well written. How long would it take to figure out some of this detail without the tutorial - too long ...

Graeme

Thanks, bug fixed.

Thanks for warm words about my improving "tutorial writer" skills. Going to write a couple of next chapters now...

Mirek
