yoh! ctrl-t! works! got it! (so why does it switch?)

app exit hangs on a new project/package, using the first template ("... bla with main window" or so...). i use winxp sp3. just added some widgets as a test, nothing special...

settings are GUI MT, MINGW Debug. strange, compiling optimal, it still hangs, of course without any opportunity to quit but killing it.

below the code- and asm area the debugger shows
"emutls_destroy ()".

stepping in the next call [F11] shows "ntdll!LdrDisableThreadCalloutsForDll () from C:\WINDOWS\system32\ntdll.dll"
