nlneilson wrote on Mon, 19 April 2010 12:35 With another SDK I copied all the files I made changes to.

After updating the SDK then just pasted in the changed files.

I also had a text file with the changes, if the SDK update had changes to those files I wanted to keep then just make the changes to the specific lines I had changed.

That way is easy and works OK, no tinkering with a svn.

This way it's actually lot more tedious than using SVN.
