Hello all

It is prepared an uppweb version (not uploaded yet) that lets to include pure html in T++ help pages.

The actual format is this:

<@
html text
@>

This lets to include for example youtube videos in U++ page.

The advantage of including this in T++ help files is that it is not necessary to include the html text in C++ code. Uppweb application just parses T++ pages. If it finds the above sequence and just considers it is pure html.

A problem of this focus is that the html text "stains" the T++ page. It would be better if html would be invisible, like an html hyperlink or an index entry.

Please tell me if this format is adequate or you would change it.

A sample picture of it:
