Yep, you should use a predicate :

```
class Predicate
{
public:
    bool operator() (const M& lhs, const M& rhs) {
        return lhs.somedata < rhs.somedata;
    }
}
```

then

```
M myVar; // M is your data class/struct
Vector<M> myVect;
FindBinary(myVect, myVar, Predicate())
```

Ciao

Max
