I thought if I will reduce length of the column with this code:

```
sql.Execute("select substr(IAN_NAME1, 1, 30) from IKIS_ERS.INSUR_ANKT_A");
```

```
int i = 0;
```

```
while(sql.Fetch())
```

```
  i++;
```

```
  Cout() << i;
```

it will help, but somehow it does not work. I get: i == 0. But it works if I get numeric value from the table:

```
sql.Execute("select substr(IAN_NUMIDENT, 1, 3) from IKIS_ERS.INSUR_ANKT_A");
```

Although normally works in the SQLPlus.
