---

I have two classes inherited from TopWindow.

class 1 need to tell class 2 to go back or forward in processing.

they OpenMain() then I use Ctrl::EventLoop().

Solution 1,

class 1 envoke a member of class 2. class 2 needs a private lock. I would rather not use this solution.

Solution 2,

From MS' view, class 1 can SendMessage() or send an event to class 2. How to achieve this in U++? How to change class 2 (TopWindow)'s processing?

Thank you.
