Hi,

I have a question regarding saving users configurations as xml from Ctrls.  
for example-

```
xml <<
  XmlHeader() +
  XmlTag("Phonebook")
  (
    XmlTag("Name").Text(panel1.droplist1.GetData())+
    XmlTag("Address").Text(panel1.editfield1.GetData())+
    XmlTag("Phone").Text(panel1.editfield2.GetData())
  );
```

what is the best way to xmlize configurations from switches and options ctrls?

regards  
dave
