Hello,

I have records like this

","201113","2577","173","2593","GM","4600010","GER "

I need to retriive the data separated by ','. Unfortunately this sign is used inside column 4 and give problem to Split(). Column 4 sometime has one ',' and sometime two ','.
Is there some special method to process such a record?

Thanks,
Luigi
