Hi, koldo,

Don't know what to do about that... I will first have to know what is painter exactly and how to use it (Some "getting starting doc would be usefull ! Is there some doc that you could advice to me ?).

For now, in the last version I sent yesterday, it seems not so bad. I'm using iml images. If Painter cannot use iml images, I'm afraid that it will be a lot of changes. Are we sure that the result will be really better ?

Another thing : I tried yesterday to compile your PainterSvgDemo, but I got an error (with 4205) in line 506 of ParseSvg.cpp. Seems not serious (conversion requested), but as I have not so much time for now, I didn't check why there is this error. I'm afraid that it hides another one...

EDIT : Pls see next post...
