Subject: Problem with IsRowEditable

Hello Daniel

Actual implementation is:

```
bool GridCtrl::IsRowEditable(int r)
{
 if(r < 0)
  r = curpos.y;
 else
  r += fixed_rows;

 return vitems[r].editable && hitems[curpos.x].editable;
}
```

I have found possible to call IsRowEditable() with r = -1 and curpos.y = -1, so an exception is thrown because of vitems[-1].

May you check this case in the function?
