Here is a sample test
Quote:

```
#include <Core/Core.h>

using namespace Upp;

COORD coord1, coord2;
Stream& s1 = Cout();
Stream& s2 = Cout();
StaticMutex mutex1, mutex2;

class multithread
{
    public :

        typedef multithread CLASSNAME;

        Thread th1, th2;

        void thr_1()
        {
            for(int i=0; i<=10; i++)
            {
                th2.Sleep(100);
                s1.SetConsoleCursorPos(coord1);
                s1 << i;
            }
        }

        void thr_2()
        {
            for(int i=0; i<=15; i++)
            {
                th1.Sleep(100);
                s2.SetConsoleCursorPos(coord2);
                s2 << i;
            }
        }

        void Test()
        {

            s1 << "\n\tTHREAD 1 ...";
            s1.GetConsoleCursorPos(coord1);
```

```
            s2 << "\n\tTHREAD 2 ...";
            s2.GetConsoleCursorPos(coord2);

            th1.Run(THISBACK(thr_1));
            th2.Run(THISBACK(thr_2));

            th1.Wait();
            th2.Wait();
        }
};

CONSOLE_APP_MAIN
{
    Stream& s = Cout();

    s.PutEol();
    s.PutEol();
    s << "\t";

    s.Colorize(1,14);
    s << "  THIS IS A CONSOLE DECORATION TEST  ";
    s.Colorize();
    s.PutEol();
    s.PutEol();

    multithread mt;
    mt.Test();

    s.PutEol();
    s.PutEol();
}
```

and the result

Wish it will be usefull for you.

Ratah
