Hi All,

Just wondering, Is there a way to hide the vertical scrollbar of LineEdit Ctrl? I have two LineEdit Ctrl displaying almost similar text with same number of lines and I only want one of them to show the vertical scrollbar and they both can be scrolled together with only one showing the bar.

I have extend the LineEdit Ctrl as follwing to get the synchronize scrolling. Now I just need a way to hide one of the vertical scrollbar now.

there is a function LineEdit::NoHorzScrollbar() but could not find a similar function for Vertical Scrollbar. I also skim through the LineEdit Class but the Scrolling mechanism looks not that easy to understand. It uses the 'Scroller' Class that I could not find any documentation for.

```
#include <CtrlLib/CtrlLib.h>

using namespace Upp;

class LineEditExtended : public LineEdit{
 public:
  virtual void NewScrollPos(){ WhenScrollChange();}
  Callback WhenScrollChange;

};

class MainWindowDlg : public TopWindow {

 typedef MainWindowDlg CLASSNAME;

 public:
    MainWindowDlg(){

                SetRect(0,0,600,400);
                tx1.VSizePos(10,10).LeftPos(10,290);
                tx2.VSizePos(10,10).RightPos(10, 290);

                this<<tx1<<tx2;

                String tmp;

                for(int i=0; i<100; i++) tmp<<i<<"\n";
```

```
            tx1.Set(tmp);
            tx2.Set(tmp);

            tx2.WhenScrollChange=THISBACK(tx1Totx2SyncScrol);
        tx1.WhenScrollChange=THISBACK(tx2Totx1SyncScrol);

    }

 private:
  void tx2Totx1SyncScrol(){
   tx2.SetScrollPos(tx1.GetScrollPos());
  }

  void tx1Totx2SyncScrol(){
   tx1.SetScrollPos(tx2.GetScrollPos());
  }

  LineEditExtended tx1, tx2;

};

GUI_APP_MAIN
{
    MainWindowDlg w;

    w.Run();

}
```

Thank & Regards

Navi
