On Ubuntu just run it with wine.

If compiled on Linux maybe just add the .exe extension to run on Win. I have not done it in a while but whatever it is it is easy. Well, the "multiplatform" part refers actually to ability to compile on multiple platform. There is nothing special about U++ that would make it possible to run with wine on Linux, almost any windows application can do that.

It is a last resort possibility, whenever you can, please make a native Linux app, the users will be grateful
