Subject: DropList bug/inconsistency

Program crashes with following code:

```
...
DropList dl;

dl.Add("A");
dl.Add("B");
dl.Add("C");
...
dl.SetIndex(dl.FindValue("D"));
...
```

My opinion is that the current index should clear any selection when it is set to -1
As it is currently I have to Clear() and re-populate the droplist, this is not right, the return values of FindKey()/FindValue() should be handled by SetIndex()
