Hello,

I diagnosed serious memory leak in MySql package. According to the following reference http://dev.mysql.com/doc/refman/5.1/en/mysql-library-end.htm l we need to call extra function (mysql_library_end(void)) to make total order.

I enclose patch code (MySql/MySql.cpp - line 132):

```
void MySqlSession::Close()
{
 SessionClose();
 if(mysql) {
  mysql_close(mysql);
  mysql_library_end();
  mysql = NULL;
  level = 0;
 }
}
```

Sincerely,
Klugier
