Hi,

I made some tests and it is possible to close skylark nicely, but there are two problems. First - quit flag is private, second "main" function waits for all threads in application.

Mirek, can you add Quit (public) method to skylark and modify Main?

```
void SkylarkApp::Quit()
{
    quit = true;
#ifdef PLATFORM_POSIX
    Broadcast(SIGTERM);
#endif
    TcpSocket s;
    s.Timeout(100);
    s.Connect("127.0.0.1", port);
}
```

```
void SkylarkApp::Main()
{
    Buffer<Thread> uwt(threads);
    for(int i = 0; i < threads; i++)
        uwt[i].Run(THISBACK(ThreadRun));

    /* Wait for threads to shut down */
    for (int i = 0; i < threads; i++)
        uwt[i].Wait();
}
```
