Subject: How to catch a (registered) Message comming from other application

Hi
I am trying to communicate among applications using windows messages. I do the x=RegisterWindowMessage("XYZ") in both applications.
On one application I do
SendMessage(HWND_BROADCAST, x,(WPARAM)GetHWND(), 0);

and then I want to wait for the response. How to wait for an external windows Message?
I tried this but never takes place:

```
LRESULT CALLBACK SKTESTE::WndProc(HWND hWnd, UINT message, WPARAM wParam,
LPARAM lParam)
{
 PromptOK("Hit!");
 if(message==x)
 {
  PromptOK("x message arriving");
  return 1;
 }

 DefWindowProc(hWnd, message, wParam, lParam);
}
```

Thanks a lot

Alex
