Hi,

I am trying to add Skylark to an application with X11 GUI and there is name clash between function name in Skylark.h and definition in /usr/include/X11/X.h:

Skylark.h:

```
virtual void BadRequest(Http& http, const BadRequestExc& e);
```

X.h:

```
#define BadRequest 1 /* bad request code */
```

Mirek, can you add #undef BadRequest to X11Gui.h?
