Proposed solution :

1) make `HttpHeader::ParseSCGI()` return true

2) Change `Http::Finalize()` like this :

```
void Http::Finalize()
{
    if(rsocket) {
        SKYLARKLOG("=== Response: " << code << ' ' << code_text);
        String r;
        ---> if(hdr.scgi)
        --->   r << ":",
```
