ManfredHerr wrote on Mon, 06 January 2014 21:25: What about `sudo apt-get install theide` ?
What do you mean? This command would install TheIDE, and nothing else. That might be what you want, e.g. in case when you use U++ sources from svn. But many people prefer to use U++ sources from the up package. The up package depends on theide package, so the command Neil posted above actually installs both TheIDE and U++ sources.

Also, the last step ("click on `/usr/share/up/upsrc/ide/TheIDE`") could be replaced by "find TheIDE in your applications menu" in most desktop environments

Best regards,
Honza
