Hi jibe,

Thanks for testing!

jibe wrote on Fri, 20 June 2014 16:03As I said before, I had some problems, the same with the 3 distros :

- No "Theide" in gnome's menu. For now, I have to create it by hand or launch it from the terminal.
- The version number is not shown when checking for updates or showing the about box
- GCC.bm is missing. I copied it from my Linux Mint, but be carefull : it's 32/64 bits dependant !

Choose the right one, or change the paths inside.

I'll try to fix those... It's the little stuff I didn't really cared about when creating the package, as I didn't know if it is going to work at all

Honza
