Plus, there is no way to call Set after NoSkipSpaces because it will override the skip. I propose these changes:

.hpp

```
void Set(const char *ptr, const char *fn, int line = 1, bool skip = true);  
void Set(const char *ptr, bool skip = true);
```

.cpp

```
void CParser::Set(const char *_ptr, const char *_fn, int _line, bool skip)  
{  
    term = lineptr = wspc = _ptr;  
    fn = _fn;  
    line = _line;  
    skipspace = skip;  
    Spaces();  
    LLOG("Set " << fn << ":" << line);  
}
```

```
void CParser::Set(const char *_ptr, bool skip)  
{  
    Set(_ptr, "", 1, skip);  
}
```
