Subject: uld with MingW-w64

Hi,

I am trying to use uld.exe as a faster linker for MingW-w64 4.9.1, dwarf exceptions, 32 bit. I built the latest release, 1.2.21 and tried to link a simple hello_world.c. First, there was a symbol __set_invalid_parameter_handler missing which I faked with:

void _set_invalid_parameter_handler() { }

Then, the program linked ok (and very fast), but the resulting exe did nothing. Loading under gdb it crashed.

How to make uld work?

Yaron
