Hi jfranks,

File build_info.h is generated by TheIDE when building. It should be overridden by -Dbm{YEAR,DAY,...} on command-line when building from source. But it is not, judging by the error you posted. I'll look at it tonight when I get home from work and try to figure out why.

This code hasn't been touched for months, it is weird that you'd be first to notice that it is broken

Best regards,

Honza
