Subject: Project questions...

1. Where can I set preprocessor symbols?

2. Where can I set libraries to link with?

3. Is there a clear way to CLOSE the current package? I also find it frustrating that there is no File -> New option.

4. Are there templates available for creating a Win32 DLL or static library? DevC++ has a really nice interface for creating new projects. I wish Ultimate++ had this interface.

Thanks,
Chris
