try this:

```
void test_tabbar::ontab()
{
    if(TB.FindKey(TB.GetHighlight()) >= 0)
    {
        PromptOK(TB.Get(TB.GetKey(TB.GetHighlight())).ToString());
    }
    else
    {
        PromptOK("key Not found");
    }

    PromptOK(TB.Get(TB.GetKey(TB.GetCursor())).ToString());
}
```
