Hi.

I try to implement GIT support to the IDE. You can find the actual implementation at https://github.com/CoolmanCZ/mirror.
Currently is supported:
* basic integration with IDE to support manipulation with the files
* GIT configuration
* GIT branch / remote configuration
* fetch, merge, push
* commit
* stash / stash apply
* GIT repository history
* GIT file history

I would like to ask you to help me with the testing, also suggestions are welcome. Please, take into account that the current implementation is a prototype. So It can be changed/enhanced by your requests.
For your requirements, please use the issue tracker at the link mentioned above.

Thanks, Radek
