Some people started using UWord for website creations..
So, I'm asking on their behalf.
How to insert and display *.png files in UWord and/or qtf?

1. case:
from upp web info:

@@format:cx&cy

something like
[@@image:cx&cy ...]
[@@file:cx&cy ...]?

2. case:
or directly as hyperlink possible?
Thanks.

P.S. Not just Paste as sequence of bits but to save space for many insertions...
