FileCtrl methods allows to insert simple widget into FileSel - for example, to specify format details when saving the file, as demonstrated with

reference/FileSelFileCtrl

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
#define LAYOUTFILE <FileSelFileCtrl/format.lay>
```

```
#include <CtrlCore/lay.h>
```

```
GUI_APP_MAIN
```

```
{  
FileSel sel;
```

```
sel.Types("Example\\*.ext");
```

```
WithFormatCtrlLayout<ParentCtrl> format;
```

```
CtrlLayout(format);
```

```
format.list.Add("First");
```

```
format.list.Add("Second");
```

```
format.list.GoBegin();
```

```
sel.FileCtrl(format);
```

```
if(sel.ExecuteSaveAs())
```

```
  PromptOK(String() << "Path: [* \\1" << ~sel << "\\1]&"
```

```
    << "Format: [* \\1" << ~format.list);
```

```
}
```
