Hello Everyone,

I'm looking for a way to show the request of HttpRequest object before Execute it.

```
#include <Core/Core.h>
using namespace Upp;
CONSOLE_APP_MAIN
{

 HttpRequest
test("http://www.holidaywebservice.com//HolidayService_v2/HolidayService2.asmx?wsdl");
 test.Post("<soapenv:Envelope xmlns:soapenv='http://schemas.xmlsoap.org/soap/envelope/'
xmlns:hs='http://www.holidaywebservice.com/HolidayService_v2/'><soapenv:Body><hs:GetHolid
aysForMonth><hs:year>2018</hs:year><hs:countryCode>UnitedStates</hs:countryCode><hs:m
onth>11</hs:month></hs:GetHolidaysForMonth></soapenv:Body></soapenv:Envelope>");
 Cout() << test.MyRequestAtString();  //Looking for something like that !
 Cout() << test.Execute();
 test.Close();

}
```

It will help me to determine why I have no response.

Thanks in advance !
