Hi,

Though I'm learning and using UPP for about an year, this is my first message to this forum. Before stating the issue, I take this opportunity to thank all contributors for making it such a great tool.

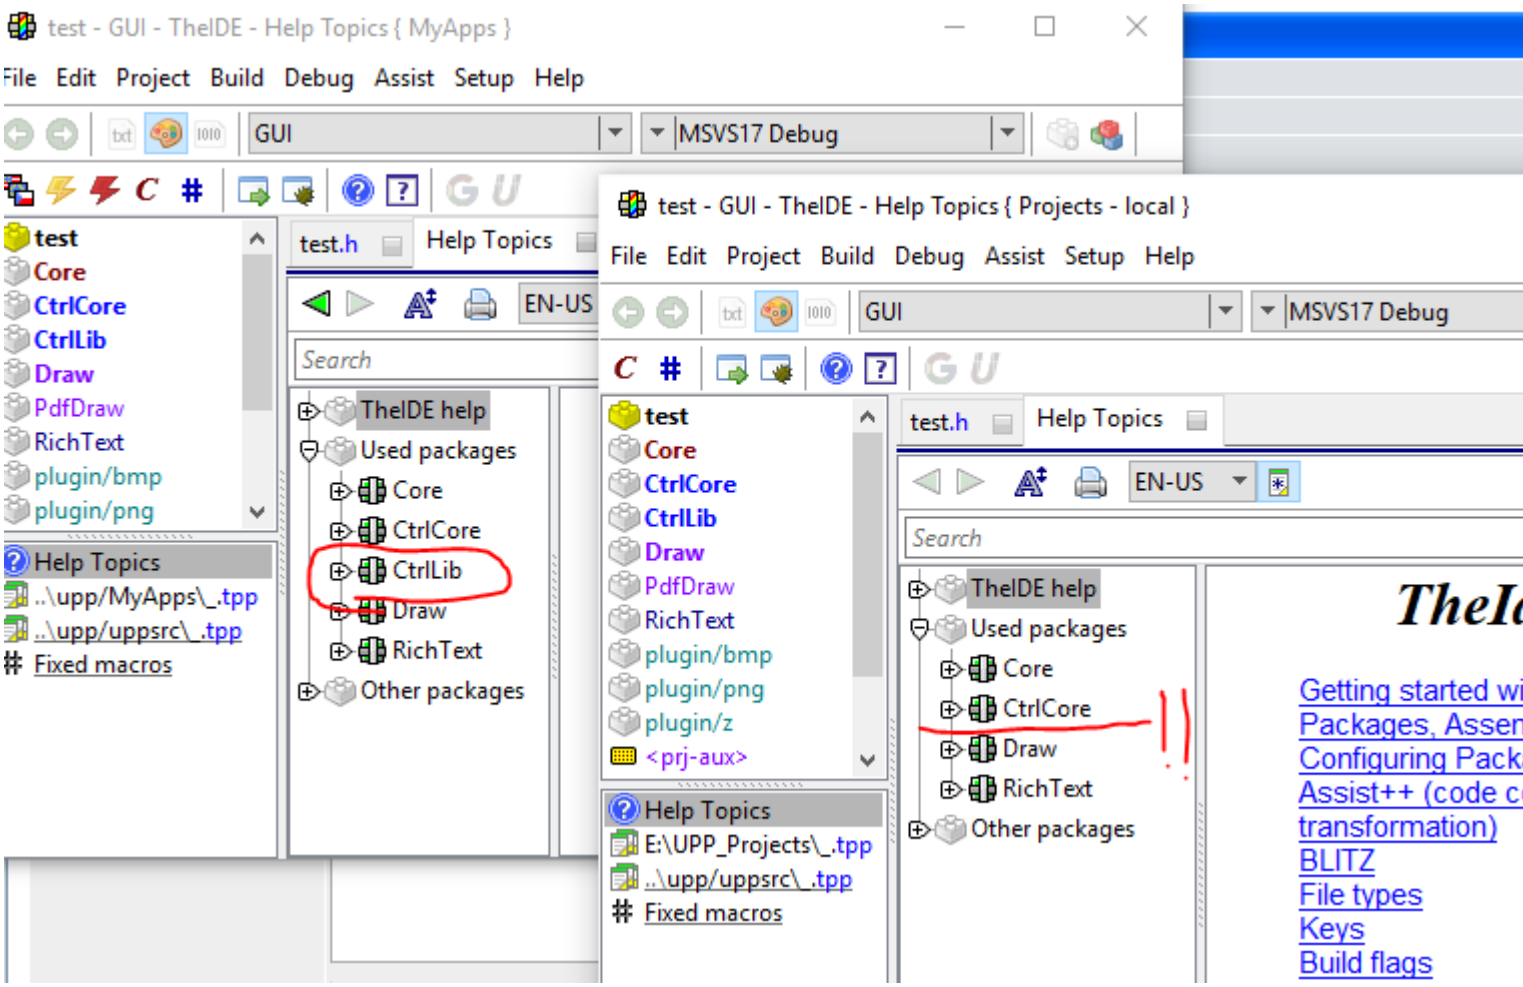

Now the issue being faced:
I have created few custom assemblies (other than the default MyApps) for keeping packages being developed. All my packages are based on CtrlLib. Now, when I keep a package in any custom assembly, In the 'Help & Topics' available as UPP tab, CtrlLib is missing from the used packages. However this issue is not there for packages in MyApps assembly. This is true even for new packages created in those assemblies. The images shows 2 such new packages: in MyApps on the left and in custom assembly on the right.

If anyone knows any workaround to solve this, please advise.

Thanks and regards,
Pradip
