I was using ThieDE and has perform a strange combination of key resulting in removing of background scope colors :

I have try many things to bring them back, looking at shortcuts, restoring default setup of TheIDE, removing all CFG file to let TheIDE restore it.
I have even recompiled TheIDE using UMK. No solution. The most strangest thing is, when I go to setting, the Setting window will over TheIDE, and at this time I see background scope colors on TheIDE (but only arround the setting window) :

Can someone help me ? Frankly, without this colors I feel like it's really hard to read my code

Thanks in advance
