It is now possible to specify Convert class singleton inline with LambdaConvert:

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
GUI_APP_MAIN
```

```
{  
    ArrayCtrl list;  
    list.AddColumn().SetConvert(LambdaConvert([](const Value& v) { return FormatIntRoman(v); }));  
    for(int i = 0; i < 100; i++)  
        list.Add(i);  
  
    TopWindow win;  
    win << list.SizePos();  
    win.Run();  
}
```
