Please, try the following code.

```
String qtf;
```

```
QtRichObject
```

```
PNGpict(RichObject("image",StoreImageAsString(StreamRaster::LoadFileAny("c:/msg_about.png"))));
```

```
QtRichObject
```

```
GIFpict(RichObject("image",StoreImageAsString(StreamRaster::LoadFileAny("c:/msg_about.gif")))
);
```

```
qtf << "[A6 The PNG image looks well: " << PNGpict << "]"&;
```

```
qtf << "[A6 The GIF image looks tiny: " << GIFpict << "]"&;
```

```
PromptOK(qtf);
```

You will see that PNG image is OK, but the GIF image is only 2 pixels in height. What's the reason of this?

I used the follwing GIF: http://www.arilect.com/upp/forum/theme/default/images/msg_about.gif

The PNG file was created with MS Paint.
