Subject: Using MYSQLDLL flag

Hello,

today I have upgraded to the recent U++ distro. So far I used a distro 1 year old.
My program uses the libmysql.dll library. However when compiling the program I forgot to add the flag .MYSQLDLL as described here
https://www.ultimatepp.org/srcdoc$MySql$NativeMySql_en-us.ht ml .
The program worked perfectly and only later I realised the missing compilation flag.

I wonder if the flag .MYSQLDLL is really necessary and I must wait some drawback.

Thanks,
Luigi
