
Subject: Possible bug in CppBuilder.cpp
Posted by [mdelfede](#) on Sat, 20 Nov 2021 23:37:43 GMT

In CppBuilder.cpp, near line 379

```
if(p.Id("exclude_path")) {  
    ExtExclude(p, packageFolder, include_path, flags);  
}  
else {  
    p.PassId("includes");  
.....
```

IMHO the 'else' is meaningless here, and the PassId("includes") throws an exception if "includes" is missing or in another position.

Looking into git code, the 'else' and 'PassId' were added in 2021/05; before it was

```
if(p.Id("exclude_path")) {  
    ExtExclude(p, include_path);  
}  
if(p.Id("includes")) {  
...
```

which should be correct.

Ciao

Massimo
