Hi Mirek,

Looks very elegant!

However, please fix the following on Linux:

```
/home/tom/upp.src/uppsrc/CtrlCore/GtkEvent.cpp:659:4: error: expected expression
      DLOG(GetKeyDesc(kv) << ", pressed: " << pressed << ", count: " <<
CurrentEvent.count);
      ^
```

```
/home/tom/upp.src/uppsrc/Core/Diag.h:158:26: note: expanded from macro 'DLOG'
#define DLOG(x)          @ // To clean logs after debugging, this produces error in release mode
                        ^
```

```
/home/tom/upp.src/uppsrc/CtrlCore/GtkEvent.cpp:669:4: error: expected expression
      DDUMPHEX(kv);
      ^
```

```
/home/tom/upp.src/uppsrc/Core/Diag.h:164:26: note: expanded from macro 'DDUMPHEX'
#define DDUMPHEX(nx)     @ // To clean logs after debugging, this produces error in release
mode
                        ^
```

2 errors generated.

Best regards,

Tom

EDIT: Sorry this newbie question here... How do I test the IME support? I just wish to know how it works.
