---

Hi,

While working with thousands of jpeg files, I've found a few, which cause app crash.  
One of them is attached.

Here's a simple testcase:

Test.upp:

```
description "Test\377";
```

```
uses
```

```
Core,  
plugin/jpg;
```

```
file
```

```
Test.cpp;
```

```
mainconfig
```

```
"" = "";
```

Test.cpp:

```
#include <Core/Core.h>
```

```
#include <Draw/Draw.h>
```

```
using namespace Upp;
```

```
CONSOLE_APP_MAIN {
```

```
String im = LoadFile("/tmp/test.jpg");
```

```
Image img = StreamRaster::LoadStringAny(im); // Segmentation fault (core dumped)
```

```
Cout() << "OK\n";
```

```
}
```

TheIDE: 16666

OS: Ubuntu 20.04

Best regards,

Victor
