Hi!

```
#include <CtrlLib/CtrlLib.h>
```

```
using namespace Upp;
```

```
GUI_APP_MAIN {  
    while (1) {  
        FileSelNative fs;  
        if (fs.ExecuteOpen()) // writes to LOG  
            PromptOK(~fs);  
        else break;  
    }  
}
```

FileSelNative() on Linux writes to LOG each time when ExecuteOpen is called:

```
_g_io_module_get_default: Found default implementation dconf (DConfSettingsBackend) for  
'gsettings-backend'
```

```
gtk_file_chooser_widget_set_current_name: assertion 'priv->action ==
```

```
GTK_FILE_CHOOSER_ACTION_SAVE || priv->action ==
```

```
GTK_FILE_CHOOSER_ACTION_CREATE_FOLDER' failed
```

Setting: `#define CATCH_ERRORS 0` in GtkApp.cpp eliminates this.

Linux Mint 21.2 Victoria base: Ubuntu 22.04 jammy

Best regards,
Victor
